

ANGEL MORENU

Gainesville, FL | U.S. Citizen | Army Veteran

angelhdbaez@gmail.com | linkedin.com/in/angelmorenu | angelmorenu.github.io

DATA SCIENTIST | DATA ENGINEER | DATA ANALYST | BUSINESS INTELLIGENCE ANALYST |
BIOINFORMATICS ANALYST | ANALYTICS ENGINEER

PROFESSIONAL SUMMARY

Applied data science professional with an M.S. in Applied Data Science and hands-on experience in Python, SQL, R, machine learning, statistical modeling, ETL, dashboarding, and bioinformatics. Proven ability to clean, validate, analyze, and visualize complex operational, research, and genomic data using reproducible workflows that support decision-making. U.S. Army veteran with a background in inventory control, logistics, data integrity, and cross-functional collaboration.

CORE COMPETENCIES

Programming: Python, SQL, R | Analytics: EDA, hypothesis testing, descriptive/inferential statistics, regression, classification, PCA, UMAP, t-SNE | Machine Learning: model selection, hyperparameter tuning, cross-validation, ROC-AUC, F1, RMSE | Data Engineering & Quality: ETL, data wrangling, data validation, data quality, relational databases, SQL optimization | Reporting & Visualization: Tableau, Power BI, Excel, KPI dashboards, reporting, trend analysis | Tools: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter, Git | Bioinformatics: genomics, PLINK, EIGENSOFT, VCFtools, bcftools, BEDTools, Treemix, ADMIXTURE, qpAdm, hapROH

PROFESSIONAL EXPERIENCE

Parts Specialist, Regional Transit System (City of Gainesville) — Gainesville, FL | Nov 2023 – Dec 2023

- Managed structured inventory records and supported operational reporting, improving data accuracy across parts systems.
- Validated discrepancies to maintain service continuity and data quality for maintenance operations.
- Partnered with technicians to track parts usage and ensure timely, accurate data logging for decision-making.

Equipment Records Parts Sergeant, U.S. Army — Fort Bragg, NC | 2014 – 2017

- Improved equipment dispatch and records reliability by enforcing accountability controls across mission-critical inventory systems.
- Led a six-person shop office supporting deployed operations and maintained essential information systems for unit readiness.
- Supported mission requirements by maintaining accurate records, tracking equipment movement, and coordinating with leadership and personnel.

Warehouse Operator, U.S. Army — Fort Bragg, NC | 2013 – 2014

- Processed 380+ repair parts valued at \$34M, supporting supply flow and mission readiness through accurate recordkeeping.
- Coordinated with adjacent units to secure parts and resources, reducing downtime and supporting operational continuity.
- Maintained shop stock and bench stock across three sections to support maintenance and repair readiness.

Combat Engineer, U.S. Army — Joint Base Elmendorf-Richardson, AK | 2009 – 2013

- Monitored patrols, air movements, personnel, and key leader locations to support operational awareness and accurate reporting.
- Recorded and analyzed route reconnaissance and IED reports to improve situational understanding and field decision-making.
- Supported multiple field exercises and live-fire training events in preparation for combat operations.

Parts Sales / Customer Service Roles — Bass Pro Shops, Gander Mountain — Gainesville, FL | 2017 – 2023

- Applied inventory controls, retail data tracking, and customer service skills in fast-paced environments.
- Supported accurate parts handling, stock organization, and customer support for product and service inquiries.

EDUCATION

M.S., Applied Data Science (Biomedical Engineering Focus) — University of Florida, Gainesville, FL |
Relevant Coursework: Machine Learning, Data Engineering, Bioinformatics, Statistical Modeling, Data Mining

Aug 2024 – May 2026

B.A., Religion & Cultural Studies; Minor, Judaic Studies — University of Central Florida, Orlando, FL

Aug 2019 – Aug 2021

A.S., Supply Chain Management; A.A., General Education — Seminole State College of Florida, Sanford, FL

May 2017 – Dec 2018

SELECTED PROJECTS

Machine Learning for Genetic Variant Classification (Capstone)

- Built an end-to-end Python and SQL pipeline to ingest, clean, and process biological datasets.
- Developed classification models to distinguish pathogenic vs. benign variants and evaluated performance with ROC curves, confusion matrix, and F1-score.
- Delivered reproducible workflow artifacts and technical documentation for repeatable analysis.

Transformer Fine-Tuning for Regulatory DNA (Bioinformatics Project)

- Designed and implemented a pipeline to classify promoters, enhancers, and DNase regions.
- Fine-tuned DNABERT-2 and Nucleotide Transformer models on ENCODE, Roadmap Epigenomics, and DeepSEA datasets.
- Benchmarked models using AUROC, PR-AUC, runtime, and cross-cell-type generalization.

Cardiovascular Disease Risk Prediction (Machine Learning II)

- Compared logistic regression, random forest, and 1D CNN models on structured health datasets.
- Evaluated trade-offs among accuracy, interpretability, and computational efficiency.
- Assessed performance using ROC-AUC, F1, precision, and recall.

CERTIFICATIONS & TRAINING

- Fundamentals of Deep Learning (NVIDIA)
- OSHA 10-Hour Certification
- Forklift Operator Certification
- Unit Movement Officer Course
- Automated Logistics Specialist
- GCSS-Army Overview
- Warrior Leader Course
- Combat Engineer Airborne
- Route Reconnaissance/Clearance Operator

ADDITIONAL STRENGTHS

- Data integrity, reproducible analysis, documentation, cross-functional collaboration, and operational reporting.
- Experience supporting logistics, research, analytics, and bioinformatics workflows in structured environments.
